EXPERIENCE

○ Data Engineer & Software Developer *November 2023 - today* Allianz Direct

Data Engineer and software developer in charge of building, maintaining and scaling a unified Data Platform as a core component of a data-centric company. My responsibilities include:

- Develop an ecosystem (custom libraries, CI/CD pipelines, IaC) in which users can automatically ingest data (Kafka, APIs, files) and transform it (Python, dbt) by just filling templates
- Build custom pipelines for Data Analytics and Machine Learning use cases
- Data governance (IAM, GDPR, data quality)
- Platform security (access controls, security by depth)
- Cost optimization (storage and compute)
- Platform monitoring (both internal and user-facing dashboards)

Tech stack: Data Platform based on Azure Databricks. Code developed in Scala, Python and SQL. GitHub used for version control and CI/CD. Terraform for IaC. For ingestion and transformation: Kafka, Spark, pandas, dbt.

○ Data Engineer *March 2022 - November 2023* Alten

Data Engineer in charge of building data pipelines to ingest, transform and load data from different business applications into a unified cloud-based data lakehouse, serving the business needs all across the process. The data lakehouse was based on Azure Databricks, and the pipelines were built using Scala, Python or SQL within the Spark framework. Other tools used: Azure Synapse, Azure Data Factory, Azure DevOps.

○ Automation Developer *October 2019 - March 2022* Prosegur

Automation of manual business processes for departments within the company, using tools such as Python, SQL and Blue Prism.
